

## OverView:

In this project, I will request data from the Amazon website on a page the Bestsellers of video Games. by (BeautifulSoup)

## Goal:

I will build the model on price by (Linear Regression) Because we want to know what the appropriate prices for video games are before adding any video game product on this site.

So that if we add the product in this section, we will have a competitive price for the rest of the stores on Amazon.

## Tools :

I will use these :

-  BeautifulSoup
-  Requests
-  Pandas
-  Numpy
-  Re
-  LinearRegression
-  Seaborn
-  mean\_squared\_error
-  sqrt
